🎯 Objective

A creative Full Stack developer driven by design and usability. Looking to join a team where I can turn ideas into elegant, functional interfaces using modern web technologies like React and MongoDB.

💼 Projects

Real-Time chat app – React.js, Express.js, Socket.io 🔗 Live: Chatapp

Developed a full-stack real-time messaging application using React, Node.js/Express, and Socket.IO with user authentication, enabling instant communication between connected users.

Valor Vault – React.js, Valorant API   🔗 Live: valorvault.info

A Valorant-themed web application providing agent insights, built using React and the valorant-api.com API. Focused on responsive UI and seamless UX.

Store rating app – React.js, Express, PostgreSQL 🔗 Live: store-rating-app Link

Full-stack app for rating local stores with role-based access (user/owner/admin), built using React, Node.js/Express, PostgreSQL, and JWT authentication.

Todolist-app – React.js

A simple and efficient Todo List App built to manage daily tasks with features like adding, editing, and deleting Todos for better productivity

Technical Skills 🛠️

Languages : HTML, CSS, JavaScript ,Node.js , Python
